Installation Guide
Indumax Filter ECO- series — After Assembling the Base Frame

Safety

Wear protective clothing during installation. **Gloves, safety glasses and a face mask are strongly recommended**, especially when filling and handling the granules.

1. Prepare the filter

1. Open the ECO- 15 / 25 door.
2. Remove the four large and four small cassettes. Set them aside.
3. Position the Base Frame as close to the filter as possible and lock the wheels.
4. Lift the filter onto the Base Frame. Position the door at the front, on the side without a raised edge.

2. Fill and install the cassettes

5. If possible, lay a groundsheet outside and place one large cassette on it.
6. Unscrew and remove the cassette lid.
7. Fill the cassette with granules up to the top edge. Spread the granules evenly.
8. Replace the lid and lightly tighten the screws.
9. Carefully slide the cassette into a large 240-litre bin bag. Take care around the hooks at the back of the lid.
10. Move the filter as close to the cassette as possible and open the door.
11. Slowly slide the cassette from the bag into the filter. If possible, have two people do this and keep the cassette as level as possible.
12. Repeat these steps until all the cassettes have been filled and installed.
13. Close the door and roll the filter to its intended position.

Note: Lock the Base Frame wheels before placing the filter on it.

Standard setup

Inlet

Outlet

In and Outlet can be changed as well

Innerwork is exchangeable, here you can change the inlet and outlet direction of the filter while keeping the same airflow in the filter.
